

SET-2

QUESTION-1

CODE:

```
# Customer Age Data
```

```
age <- c(25, 30, 35, 28, 40)
```

```
# Histogram
```

```
hist(age,
```

```
      col = "skyblue",
```

```
      main = "Distribution of Customer Ages",
```

```
      xlab = "Customer Age",
```

```
      ylab = "Frequency",
```

```
      border = "black")
```

QUESTION-2

CODE:

```
# Satisfaction Scores
```

```
score <- c(4, 5, 3, 4, 5)
```

```
# Frequency Table
```

```
score_table <- table(score)
```

```
# Pie Chart
```

```
pie(score_table,
```

```
    labels = paste(names(score_table), "(", score_table, ")"), sep = ""),
```

```
    col = rainbow(length(score_table)),
```

```
    main = "Customer Satisfaction Scores")
```

QUESTION-3

CODE:

```
# Customer Data
```

```
age_group <- c("20-30", "20-30", "31-40", "20-30", "31-40")
```

```
score <- c(4, 5, 3, 4, 5)
```

```
# Create Table
```

```
data <- table(age_group, score)
```

```
# Stacked Bar Chart
```

```
barplot(data,
```

```
  beside = FALSE,
```

```
  col = c("red", "green", "blue"),
```

```
  main = "Customer Satisfaction by Age Group",
```

```
  xlab = "Age Group",
```

```
  ylab = "Number of Customers",
```

```
  legend = rownames(data))
```

QUESTION-4

CODE:

```
# Install package (Run only once)
```

```
# install.packages("wordcloud")
```

```
library(wordcloud)
```

```
# Customer Feedback
```

```
feedback <- c(
```

```
  "Good service",
```

```
  "Excellent support",
```

```
  "Fast delivery",
```

```
  "Excellent quality",
```

```
  "Good quality",
```

```
  "Good service",
```

```
  "Friendly staff",
```

```
  "Fast delivery",
```

```
  "Excellent service",
```

```
  "Quality products"
```

```
)  
# Generate Word Cloud  
wordcloud(  
    words = feedback,  
    random.order = FALSE,  
    colors = rainbow(10)  
)
```
